

In JavaScript there are 2 browser specific objects to store properties, localStorage and sessionStorage

functions in localStorage and sessionStorage

setItem, getItem, removeItem, clear

localStorage	The properties will be available even after closing the browser window. It will remain in the object till you delete it explicitly
sessionStorage	The properties will be available till the browser window is open. you may delete it by using clear or removeItem

geolocation API

These API are used to find gps location programmatically. the object is available in navigator.geolocation

getCurrentPosition	to get the current position
watchPosition	to get the live location
clearWatch	to stop watchPosition
